Advanced Custom Fields PRO

[Edit](#) | [Delete](#) | [Update Required](#)

WPBakery Visual Composer

[Edit](#) | [Delete](#) | [Update Required](#)

The two plugins above DO NOT have “Activate” links! I had IDX issues (bootstrap conflicts & more) and I had to deactivate all plugins to figure out if one (or more) of them were causing the problems. I could not reactivate the two above. (Templatera is activated!)

Templatera

[Deactivate](#) | [Edit](#)

Templatera requires [Visual Composer](#) plugin to be installed and activated on your site.

The above message is displayed at the top of the plugin page!

Realty - Data Migration to v2.0

[Activate](#) | [Edit](#) | [Delete](#)

I have **NOT updated to Realty 2.0** because I’m not sure of exact step-by-step process. I am **confused by the instructions** next to the plugin (below). According to the instructions after backing up my database the **first step** is to activate the plugin? Then, the **second step** is to activate another theme? Then, the **third step** is to re-activate the Realty theme (child theme)? Then, **fourth step** is to edit a property to verify that it migrated? Then, the **fifth step** is to deactivate the “Realty – Data Migration” plugin and delete it? **ALSO** – are there any “special steps” when **updating Wordpress**?

Running this plugin will update your database, please make sure to backup your database before proceeding! Activate Plugin, activate another theme than Realty, then switch back to Realty. Edit a property to see if the data has been migrated properly. then deactivate and delete the plugin

Version 2.0 | By ThemeTrail | [Visit plugin site](#)

[WordPress 4.9.1](#) is available! [Please update now.](#)
